

PERMANENT BROW AFTERCARE

Please read and follow these instructions as directed.

EYEBROWS · MICROBLADING

It is extremely important that you read and follow these instructions as directed. Not following them may put you at risk for infection, affect the final result of your procedure, or interfere with the color bonding process.

DAY ONE

- Your brows will look darker, bolder, and sharper than the final result. This is normal.
- For the first 2–3 hours, gently blot any clear fluid from the brows every 15–20 minutes with a clean, damp cotton pad or tissue.
- Before bed, rinse gently with cool water and pat dry with a clean tissue.
- With a clean fingertip, apply a rice-grain-sized amount of the aftercare ointment provided, spread thinly. Too much ointment can pull pigment out.
- Sleep on your back with your head elevated. Use a clean pillowcase.

DAYS TWO TO SEVEN

- Morning and evening, rinse gently with cool water, pat dry, and apply a very thin layer of ointment.
- Some redness, tenderness, and itching are normal.
- Keep brows dry otherwise. Keep your face out of the shower stream and avoid getting shampoo or cleanser on them.

DAYS SEVEN TO FOURTEEN

- Brows will begin to flake. **DO NOT PICK, PEEL, OR SCRATCH.** Let flakes fall off naturally.
- Once flaking starts, the color may look very light or patchy. This “ghosting” stage is normal, and color returns over the following weeks.

WEEKS FOUR TO SIX

- Healing is complete and your true color and shape are visible.
- Some strokes may have faded. This is expected, and gaps are filled in at your touch-up.

ADDITIONAL INSTRUCTIONS FOR THE FIRST TWO WEEKS

- Wash your hands thoroughly before touching the treated area.
- No makeup, brow products, or skincare products on or around the brows until fully healed.
- No heavy sweating, workouts, saunas, steam rooms, hot tubs, or swimming.
- Avoid sun exposure and tanning beds. After healing, use sunscreen on your brows to help the color last.
- No brow waxing, tinting, threading, or plucking near the treated area.
- No Retin-A or other retinoids, chemical peels, glycolic acid, AHAs, or facials near the brows.
- Do not pick or peel! This can pull the color out.

CALL THE OFFICE RIGHT AWAY if you notice increasing pain, pus or discharge, spreading redness, fever, or any other sign of infection.

TOUCH-UP: Please schedule your touch-up appointment within 3–4 weeks after your procedure. Touch-ups must be completed within 60 days.
